SIVANANDH PP

linkedin.com/in/sivanandh | +91 9072 7086 20 | sivanandhpp.github.io | sivanandhpp@gmail.com

Skills

- Programming Languages: C/C++, Java, Python, Dart
- Tools and Technologies: Flutter, Firebase, Git & Github, UI/UX, Web, Android, Figma, MS Office tools, Adobe CC.
- Languages: English, Malayalam, Hindi– *All professional proficiency or above*

Education

Master of Computer Applications **Jain (Deemed-to-be University)** **07/2024 - 06/2026**

- Major in Advanced Computer Science and Applications
- Course Work: Java, Python, SQL, NoSQL, IoT, Artificial Intelligence, Machine Learning, Data Science, Data structures, Algorithms, Cyber Security, Ethical Hacking, Advanced Computer Networks, Advanced Operating Systems, Advanced Computer Architecture

Bachelor of Computer Applications **Acharya Institutes** *Bangalore, India* **07/2019 - 09/2022**

- Major in Computer Science and Applications | CGPA: 7.45
- Course Work: C/C++, Java, MySQL, OOPs, Compilers, Data Structures, Algorithms, Operating Systems, Artificial Intelligence, VB.NET, Software Testing, Software Engineering, System Programming, UNIX, Data Communication, and Networks.

Work Experience

Software Engineering Intern **ULTS Global** *UL Cyberpark, Calicut* **07/2025 - 10/2025**

- Built a full-stack e-commerce platform using **Flutter**, **NestJS**, and **PostgreSQL**, containerized with **Docker** for scalable deployment.
- Designed a reusable and extensible architecture adaptable for **any company**, reducing rework and boosting efficiency.
- Implemented a **modular architecture** enabling real-time product, order, and inventory management with high scalability.

Flutter Developer Intern **EBS Global** *Sahya Cyberpark* **07/2025 - 09/2025**

- Developed responsive and visually engaging **Flutter UIs** ensuring smooth performance across Android and iOS platforms.
- Integrated **RESTful APIs** and implemented **GetX state management** to improve scalability and ensure efficient data handling.
- Collaborated with the backend team to debug, test, and optimize **app performance** for faster load times and seamless user experience.

Latest Projects

Plant Disease Analysis using AI Model **SmartKisan** **- Link**

- Built an AI powered Plant Disease detection model using CNNs to detect plant diseases from leaf images with high accuracy.
- Implemented preprocessing and augmentation pipelines using TensorFlow/Keras to enhance overall model performance and stability.
- Developed an automated prediction workflow that processes leaf images and classifies plant diseases in real time with high reliability.

Smart Banking with Realtime Dashboard **FinFlex** **- Link**

- Developed a real-time online banking app using Flutter and Firebase, featuring instant fund transfers, live transaction tracking.
- Implemented a dynamic realtime dashboard to display live account balances, recent transactions, and personalized insights.
- Integrated instant notifications for deposits, withdrawals, and account activities to enhance transparency and user trust.

One-Stop Solution for Academic Resources **Nerve** **- Link**

- Developed an application for document sharing, specifically designed to assist students in easily managing academic resources.
- Added notifications to enhance user experience and communication, and a query-adding option to report and resolve student issues.
- Built an admin panel that enables easy management of students, document uploads, and user privileges, such as assigning faculties.

Certificates

- Databases and SQL for Data Science with Python by IBM link **05/2025**
- Research paper on adaptive AI in gaming at the ICAISM 25 link **04/2025**
- Crash Course on Python by Google offered through Coursera link **03/2025**
- Fundamentals of Java Programming by Coursera link **03/2025**
- Git and Github Crash Course by Udemy link **08/2022**
- Java Programming Certification by Hackerrank link **04/2022**
- Flutter Development Using Dart by AppBrewery link **04/2020**
